What problem are you trying to solve?

Connect the 20th Century Folks to Digital

How do you plan to solve the problem?

To set up a platform and coordinate local Facebook / Whatsapp / Telegram Channels to feed public authority information broadcast (push notifications).

To setup volunteers from local communities to assist and drive the communication channels from traditional posts to digital channels.

Duo-lingo support. The smart cities are now having global citizens and would definitely require some global language to spread the right information without any additional dependencies.

Kommune Bot: To answer queries over SMS text / WhatsApp (free service) using AI.

How do you plan to make this solution a reality? Do you have an action plan?

Yes, I think it's more or less to make use of the existing comms channels and what we need here to drive the change. Collate all contacts within the commune and in the initial stage, there may be a need of some push messages to get in sync with the groups which are already in place.

Why is your solution innovative?

There are solutions in place but not all are been in sync and the mission of this project to elevate and bring all silos in together to share the information to the public as quickly as possible from the commune.

How scalable is your solution?

Yes, this can be scaled across the Nordics. But i would recommend a test pilot bed of a sample usergroup of 1000.

How does your solution make an impact?

It's always a positive impact and of course, we need to consider the consent with GDPR.

Is your solution built on prototype or is it a conceptual solution?

Conceptual
